EDUCATION

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY
Bachelor of Engineering - Artificial Intelligence and Data Science (CGPA: 8.38/10.0)

Bengaluru, Karnataka, India
Graduated Jun 2025

TECHNICAL SKILLS

Tools: MS Excel (Advanced), Google Sheets, Power BI, Tableau, Snowflake
Programming: Python, SQL, C/C++
Databases: MySQL, MongoDB
Core Concepts: Exploratory Data Analysis (EDA), KPI Tracking, Trend Analysis, Statistical Analysis
Technical Knowledge: OOP, Data Structures Algorithms, DBMS, Computer Networks, Machine Learning
Other Tools: Git, GitHub

EXPERIENCE

Bewakoof – Business Analyst Intern
Analytics Focus: E-commerce Analytics, Campaign Performance Analysis, Customer Behavior Analysis

May 2025 – Sept. 2025

- * Applied data analysis on inventory, returns, and sales to identify trends and operational gaps.
- * Used Excel , SQL and Power BI to track inventory movement, return patterns, and sales trends across marketplaces.
- * **Identified 50+ slow-moving SKUs** due to multiple operational issues and high return rates, supporting improved sales focus.

PROJECTS

Bewakoof × Zepto – Sales Analytics Project | *GitHub*

- **Tools Used:** SQL Server, SQL (Joins, CTEs, Window Functions, Aggregations)
- Analyzed end-to-end sales data to evaluate product performance, revenue trends, and inventory risk.
- Designed a relational database schema and performed data cleaning to ensure consistency and accuracy.
- Identified top-performing categories, cities, and SKUs contributing to overall revenue growth.
- Performed time-based analysis to uncover daily and city-wise sales patterns.
- Detected low-stock high-demand products to highlight potential inventory risks for quick-commerce operations.
- Generated business-ready insights supported by SQL queries and visual outputs for decision-making.

CheckIn-CheckUp – Hospital Data Analysis | *GitHub*

- **Tools Used:** Microsoft Excel (PivotTables, Charts, Advanced Formulas, Conditional Formatting)
- Analyzed 55,000+ hospital admission records to explore trends in patient demographics, billing, and diagnoses.
- Cleaned and structured raw data by removing duplicates, filling missing values, and standardizing date formats.
- Engineered new columns like Length of Stay and Admission Month to enrich analytical depth.
- Identified that Arthritis and Asthma cases contributed to 25% longer hospital stays and higher treatment costs.
- Built an interactive Excel dashboard summarizing five key insights for hospital decision-makers.

AgroPredict – Crop Prediction Model | *GitHub*

- **Technologies:** Python, Pandas, NumPy, Scikit-Learn, Keras, Machine Learning
- Developed a crop prediction model using soil and weather data to assist farmers in making informed decisions.
- Compared multiple models — Random Forest (97.24%), Decision Tree (96.48%), SVM (96.36%), and Logistic Regression (95.60%) — for performance evaluation.
- Enhanced overall accuracy using ensemble majority voting, achieving an optimized and reliable model.
- Applied feature scaling and hyperparameter tuning to improve robustness and reduce model variance.

HONORS AND AWARDS

- Completed Data Analyst Bootcamp from Basics to Advanced on Udemy(Profile).
- 2-star (1428 rating) coder at CodeChef (Profile).
- 4-star in C at HackerRank (Profile).
- 3-star in C++ at HackerRank (Profile).
- 4-star in Python at HackerRank (Profile).
- Solved 350+ coding problems across multiple platforms: CodeChef, LeetCode, GFG, HackerRank, StrataScratch.

VOLUNTEER EXPERIENCE

NSCC Core Team

Mar 2023 – Feb 2024

Collaborated with team members to organize tech events, promoting tech literacy and student collaboration. Played a key role in designing and implementing initiatives, supporting the club’s mission to empower students through technology.
